

TARA STOP WATCH MODULE

The **TARA Stop Watch Module** with Stop Switch allows you to accurately time your starts so you can improve your Hole-Shot time. When the Green Light lights on either your AGC-4 or AGC-4P the timer starts. When you run over the yellow stop switch or pass through the beam of the optional Infrared Stop switch placed some distance away, the timer stops. Standard length for the stop switch is 20'. The stop switch uses a standard ¼" stereo phono plug and extension cables can be bought at any electronics supplier to increase the distance to your desired length. Timing is accurate to .01 seconds until you reach 19.99 seconds. Then the timing accuracy reduces to .1 seconds.

Features

Accurately times your Starts!

Can be used with the standard one-man Stop Switch or an optional Infrared photo switch for multiple riders!

Works with TARA AGC-3P, AGC-4, AGC-4P and most AGC-3 Models!
